

BIOGRAPHICAL SKETCH

Provide the following information for the Senior/key personnel and other significant contributors.
Follow this format for each person. **DO NOT EXCEED FIVE PAGES.**

NAME: **THEOHARIDES, THEOHARIS C.**

eRA COMMONS USR NAME (credential, e.g. agency login): **THEOHAR**

POSITION TITLE: **PROFESSOR OF IMMUNOLOGY**

EDUCATION/TRAINING (*Begin with baccalaureate or other initial professional education, such as nursing, and include postdoctoral training.*)

INSTITUTION AND LOCATION	DEGREE (if applicable)	YEAR(s)	FIELD OF STUDY
Yale University, New Haven, CT	B.A.	1972	Biology & Hist. Medicine
Yale University, New Haven, CT	M.S.	1975	Neuroimmunology
Yale University, New Haven, CT	M.Phil.	1975	Immunopharmacology
Yale University, New Haven, CT	Ph.D.*	1978	Pharmacology
Yale University, New Haven, CT	M.D.	1983	Medicine
Tufts University, Fletcher School Law & Diplomacy	Certificate	1999	Leadership & Management
Harvard Univ, J.F. Kennedy School of Government	M.P.A.	Deferred	Biomedical Res Policy

*Doctoral Thesis advisors: *W.W. Douglas, M.D.-Royal Acad. Sciences; Paul Greengard, Ph.D.-2000 Nobel Laureate in Physiology & Medicine; Doctoral Thesis examiner: George E. Palade, M.D.- 1974 Nobel Laureate in Physiology & Medicine*

A. Personal Statement

I have been studying the regulation of mast cells and their role in allergic and inflammatory diseases for over 30 years. I was the first to report that mast cells can: (a) secrete specific mediators selectively without degranulation; (b) regulate blood-brain-barrier permeability; (c) be activated by corticotropin-releasing hormone (CRH) secreted under stress to release VEGF selectively; (d) be activated by synergistic action of CRH and neurotensin; (e) can be activated by IL-33 and substance P (SP) synergistically to secrete the pro-inflammatory cytokines IL1 β and TNF; (f) secrete mitochondrial DNA (mtDNA) extracellularly that is mistaken by the body as a pathogen resulting in inflammatory reactions; (g) communicate with microglia and are involved in inflammation of the brain especially as they may relate to the pathogenesis of Autism Spectrum Disorders, Myalgic Encephalomyelitis/Chronic Fatigue Syndrome and Mastocytosis, diseases that are often comorbid and affect multiple organs without effective treatment. We have shown that secretion of mast cell mediators is inhibited by the natural flavonoids luteolin and methoxyluteolin. My laboratory has been committed to uncovering ways to regulate secretion of mast cell mediators for which there is no clinically effective drug since the only "mast cell blocker" cromolyn is weakly effective and shows rapid tachyphylaxis. I have published over 450 peer-reviewed papers (*h-index* 90) and have been placed in the top 5% of authors most cited in pharmacological and immunological journals. I, therefore, believe I am well qualified to contribute substantially to the proposed application.

B. Positions and Honors***Positions***

1968-1971 Assistant in Research, Department of Biology, Yale University, New Haven, CT
 1971-1978 Assistant in Research, Department of Pharmacology, Yale University, New Haven, CT
 1978-1983 Research Associate, Allergy & Clin. Immunology, Dept. Internal Med, Yale
 1984-1986 Associate in Clinical Immunology, Tufts University School of Medicine, Boston, MA
 1986-1993 Training in Internal Medicine, Dept. of Internal Medicine, NEMC, Center, Boston,
 1985-1992 Director of Medical Pharmacology, Tufts University School of Medicine, Boston,
 1983-1988 Assistant Professor of Pharmacology, Biochemistry and Psychiatry, Tufts University
 1989- Associate Professor of Pharmacology (1989-1994), Biochemistry and Psychiatry, Tufts
 1995- Professor of Pharmacology, and Biochemistry (2002-), Tufts U (tenured 11/2/91)
 1995- Professor of Internal Medicine (Allergy Section), Tufts Univ & Tufts Medical Center
 2004- Director, Molecular Immunopharmacology and Drug Discovery Laboratory, Tufts

Honors

1971 *Connecticut Commission for Undergraduate Research Award*
 1971 *Yale College Dean's Award* for senior research thesis
 1972 *Cum Laude & Divisional Honors* for joint Bachelor of Arts, Yale College
 1972 *Theodore Cuyler Award* "for outstanding Yale College graduates," Yale University
 1975-1977 *Advisory Committee to the Dean*, Yale University Graduate School
 1977 *G. Papanicolaou Graduate Research Award*, Hellenic University Club of New York
 1979-1983 *Medical Award*, Hellenic Medical Society of New York
 1980 *Winternitz Prize* "for the best work in Pathology," Yale Univ. School of Medicine
 1981-1982 *Research Fellowship*, International Inst. of Cellular & Molecular Pathology, Brussels
 1986-1989 *Chairman - Neuroimmunology*, 2nd & 3rd World Conf on Inflammation, Monte Carlo
 1986 *Distinguished Service Citation* for faculty excellence, Tufts University
 1987-1988 *Special Faculty Recognition Award*, Tufts University School of Medicine
 1987 *Member, Alpha Omega Alpha* National Medical Honor Fraternity, USA
 1989-1996 *Citation for Excellence in Teaching*, Tufts University School of Medicine
 1993 *Medical Awareness and Patient Support Award*, Interstitial Cystitis Association, NY
 1994 *Diocean Award for Humanitarian Health Care*, Greek Orthodox Diocese of Boston
 1995 *Chairman*, International Committee to Upgrade Medical Education in Greece
 1997-2001 *Supreme Scientific Advisory Health Council*, Secretary of Health, Hellenic Republic
 1998 *Community Service Award*, Mayor Thomas Menino of Boston, MA
 1999-2002 *Supreme Health Board*, Instit of Social Welfare, Sec. of Labor & Human Res,
 1999 *Oliver Smith Award* "recognizing excellence, compassion and service", NEMC
 1999 *Archon of the Ecumenical Patriarchate of Constantinople*, Greek Orthodox Church
 2002 *Dr. George Papanicolaou Gold Medal* for contributions in humanism and medicine
 2003-2008 *National Public Health Council*, Secretary of Health, Hellenic Republic
 2006 *Hygeia Award*, New Engl. Hellenic Medical & Dental Society, Boston, MA
 2007 *Science and Medicine Award*, Fed. HASNE, Boston, MA
 2008 *Fellow*, American Academy of Allergy, Asthma, Immunology
 2009 *Fellow*, European Academy of Allergology and Clinical Immunology
 2011 *Honorary Doctor of Medicine*, Athens University (conferred January, 2011)
 2013 *Honorary Doctor of Science*, HellenicAmerican University (conferred October, 2013)
 2018 *Albert Nelson Marquis Lifetime Achievement Award* (Marquis Who is Who)
 2018 *Albert Nelson Marquis Distinguished Humanitarian Award* (Marquis Who is Who)

Public Advisory Committees

1986-2018 Massachusetts Drug Formulary Commission
 2001-2002 NSF Div. Integrative Biology and Neuroscience
 2000-2002 NIH Biobehavioral & Behavioral Processes-SS2

C. Contribution to Science (selected from 433 papers in Pubmed.gov; 33,150 citations; h-index 87).

1. Mast cells secrete the mediators selectively, thus participating in different biological processes.

Ever since I was a graduate student, I was fascinated by the ability of the mast cells to store or synthesize as many as 100 different biologically active mediators. As part of doctoral thesis, I showed that mast cells can secrete either the content of individual granules, without compound exocytosis, or individual mediators without degranulation. I further showed that there may be an internal mechanism regulating stimulus-secretion coupling and degranulation involving the phosphorylation of a particular protein we later cloned. The ability of mast cells to secrete individual mediators could explain their involvement in numerous pathophysiological processes and inflammatory diseases.

- Theoharides TC, Bondy PK, Tsakalos ND, Askenase PW. Differential release of serotonin and histamine from mast cells. **Nature** 1982; 297:229-231. PMID: 6176873

2. Stress has pro-inflammatory effects through CRH-induced mast cell activation.

Allergic and inflammatory diseases are known to worsen with emotional and physical stress, but they have been historically considered to be of psychosomatic origin. We showed for the first time that the key hormone secreted under stress, corticotropin-releasing hormone (CRH) can be secreted outside the hypothalamic-pituitary-adrenal axis and stimulate mast cells to selectively secrete pro-inflammatory mediators without degranulation, as well as augment allergic triggers leading to degranulation. These findings extend out previous reports of the ability of mast cells to secrete individual mediators and expand the ability of mast cells to participate in the pathogenesis of diseases that worsen with stress, including the disruption of the blood-brain barrier, which is involved in multiple sclerosis and other inflammatory diseases of the brain.

Increased serum CRH levels with decreased skin CRH-R1 gene expression in psoriasis and atopic dermatitis. *J Allergy Clin Immunol*. 2012; 129(5):1410-3. PMID: 22360979; PMCID: PMC3340539

3. **Mast cells are involved in inflammatory conditions.**

Increasing evidence supports the involvement of mast cells not only in allergic, but also in inflammatory diseases. In order for the mast cells to play such an important role, they should be able to not only release pro-inflammatory mediators selectively, but do so in pathological quantities. We showed that when human mast cells are stimulated by the neuropeptide substance P together with the cytokine IL-33, they secrete impressive amounts of VEGF, TNF and IL-1 β without degranulation. These results indicate that mast cells can respond to neuroimmune triggers with selective release of key mediators that could contribute to the development of neuroinflammation and may explain the pathogenesis of diseases such as Autism Spectrum Disorders, Myalgic Encephalomyelitis/Chronic Fatigue Syndrome and Mastocytosis, diseases that are often comorbid and affect multiple organs without effective treatment.

4. **Mast cells, microglia and objective biomarkers in autism spectrum disorder (ASD).**

Autism is still classified as a psychiatric diseases and, in spite of the discovery of numerous mutations, the pathogenesis remain unknown and there are no objective biomarkers hampering its effective treatment. We showed that the peptide neurotensin, found in the brain and the gut, is uniquely increased in the serum of children with ASD as compared to normotypic controls. We further showed that neurotensin can stimulate human cultured microglia, the innate brain immune cells, to release pro-inflammatory mediators, possibly enclosed inside extracellular microvesicles that would protect them from degradation and allow them to reach the brain. These results support the presence of inflammation in the brain of children with ASD, possibly in the amygdala where microglia have been shown to be activated, and indicate that neurotensin could serve both as a biomarker and as a target for novel therapies. Two patents have been awarded to me as follows: US 9,050,275 (issued 06/09/15), entitled, "Methods of treating autism spectrum disorders and compositions for same" and US 9,176,146 (issued 11/3/15) entitled, "Methods of screening for and treating autism spectrum disorders and compositions for same."

5. Luteolin and methoxyluteolin have potent anti-oxidant and anti-inflammatory actions.

In spite of the involvement of mast cells in allergic and inflammatory diseases, there no clinically effective inhibitors of the secretion of mast cell mediators, except for the “mast cell blocker” cromolyn, which is a weak inhibitor of histamine secretion and shows rapid tachyphylaxis. My lab has been committed to uncovering ways to regulate secretion of mast cell mediators for which there is no clinically effective drug since the only “mast cell blocker” cromolyn We have shown that secretion of mast cell mediators is inhibited by the natural flavonoids luteolin and methoxyluteolin. The US patent no. 8,268,365 (issued 9/18/12) entitled, “ Anti-inflammatory compositions for treating brain inflammation” has been awarded to me and involves flavonoid combinations now available in unique dietary supplements.
